PROFESSIONAL SUMMARY

B.Tech CSE graduate (AKTU 2026) specializing in AI-powered backend development with Python, FastAPI, and REST APIs. Hands-on builder of real-world OCR and Speech Recognition systems, integrating OpenCV, EasyOCR, and OpenAI Whisper into scalable, production-ready backends backed by MongoDB. Passionate about clean API design, ML model integration, and delivering high-performance backend solutions — ready to contribute from day one.

TECHNICAL SKILLS

Languages: Python • SQL

Backend & APIs: FastAPI • REST API • Backend Architecture • JSON APIs • Async Processing

AI / ML: OpenCV • EasyOCR • OpenAI Whisper • Computer Vision • OCR • Speech Recognition • ML Model Integration

Database: MongoDB • NoSQL • JSON Data Processing • Schema Design • MySQL

Tools: Git • GitHub • Postman • VS Code • API Testing

Concepts: Error Handling • Input Validation • Scalable API Design • Data Serialization • Microservices Basics

PROJECTS

AI-Powered Vehicle Number Plate Detection & Recognition System | Python • FastAPI • OpenCV • EasyOCR • MongoDB

- Built a production-ready AI backend to detect and extract vehicle license plate text using FastAPI, OpenCV, and EasyOCR — designed for real-world traffic monitoring and vehicle tracking applications.
- Developed RESTful APIs for image upload, multi-stage OCR pipeline (preprocessing → detection → extraction), and structured JSON response generation with full error handling and input validation.
- Persisted extracted plate data to MongoDB with structured schemas; architected modular, scalable components to support future extension to real-time video stream processing.

Speech-to-Text Transcription Backend System | Python • OpenAI Whisper • FastAPI • Audio Processing

- Developed a scalable AI transcription backend using OpenAI Whisper supporting multi-format audio (WAV, MP3, M4A) with high-accuracy, multi-language speech-to-text conversion.
- Exposed clean REST API endpoints for integration with web and mobile apps; implemented async audio processing, format normalization, robust error handling, and structured logging for production reliability.

EDUCATION

B.Tech – Computer Science & Engineering (CSE) | 2022 – 2026

Future Institute of Engineering & Technology | AKTU | All Semesters Completed — Result Awaited
